Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 9/29/03 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner. There is one reference that has been crossed-out because it was listed in the information disclosure statement twice.

Drawings

The drawings are objected to because the drawings do not clearly show the holding extensions and it is indefinite exactly what the shape is since each one looks slightly different. Some look curved while others look straight, the gripping points that have reference numerals appear to come right to a point while the other gripping points look very curved. Also it is not clear what the reference numerals "44", "46" and "48" are referencing. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled

"Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities:

1) Page 6, lines 11-17, the explanation in this paragraph as to the difference between the "rim gripping region", the "rim support region" and the "raised portion" is not clear. The drawings also do not further facilitate the understanding of these features.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Letourneau et al. (6,398,056 B1). Letourneau shows a cupholder constructed of a molded fiber material which comprises a plurality of frusto-conical cavities having a curved inner wall, three holding extensions extending inwardly and spaced

equidistantly, with first and second gripping flanges (22) having first and second gripping points at lower ends thereof for gripping a container and inner and outer facets that meet at a facet interface. The flanges meet at a parabolic junction along a top end. The holding extensions terminate at a cut-out area. The base is narrower than the mouth of the cavity and has raised portions with rim gripping regions (18).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
